WhereIsIt 3.26: This is done using the installer. It is preferable to remove this entry first so that the program will work without problems.Molecular characterization of altered trypsin and chymotrypsinogen A genes in a mouse model of human hereditary pancreatitis. Chronic pancreatitis (CP) is the most common consequence of CP. Hereditary pancreatitis (HP) is a risk factor for development of pancreatic cancer. The aim of our study is to detect differences in gene expression of two trypsinogen genes (PRSS1, B2) in chymotrypsinogen (CTR) and one (CTR-A) in its inactive form. We performed DNA sequencing, in situ hybridization and quantitative real-time PCR for the detection of CPs variations in three mouse strains: B6.129S2/SvPasCrif (B6), DBA/2 (DBA) and 129X1/Svj (129). These mouse strains are prone to develop CP. Genomic DNA of mice was isolated by proteinase K digestion, followed by phenol/chloroform extraction. Nucleotides 534-963 and 1330-1642 of B2 and 3263-3624 of PRSS1 and CTR and their spliced forms are identical in all three strains. The PCR products of B2 and CTR show SSCP polymorph
