SCPH-50004 EUR Con 0170 20030227 V9.p2b.epub Â· The Secret Life Of Walter White Teaser Trailer.PAINTSHOP.COM Preview of the website in Thumbnail size. Meta Keys provide information about a given Web page, most often to help search engines categorize them correctly. They are inserted into the HTML document, but are often not directly visible to a user visiting the site. Title PaintShop Pro Portable Software Description The PC PaintShop Pro 7 portable edition is a major step forward in digital media art creation. It is the complete Digital Artist solution with all of the creative tools, features and productivity of PaintShop Pro 7 and beyond. Now you can take your digital art creation from laptop to portable, wherever you go. With the PaintShop Pro 7 Portable Edition, you can work on one computer and keep your work safe and easily accessible anywhere.Q: Identify incorrect view in if statement In my app I have a view - which I need to hide when an error occurs. I do this through a function. So what I do is: When an error occurs - I add a UIAlertView to the view and reload the view: func errorOccurred(withTitle: String, errorMessage: String) { let alert = UIAlertView() alert.title = "Error" alert.message = errorMessage alert.addButtonWithTitle("Ok") alert.addButtonWithTitle("Cancel") self.view.window?.rootViewController?.presentViewController(alert, animated: true, completion: nil) self.view.window?.rootViewController?.reloadInputViews() } And in my view I use an if statement to figure out if it was an error or it's just the view: override func viewDidLoad() { super.viewDidLoad() if errorOccurred("Problem Occurred", "Please contact us", nil) { // code } } The problem I am having is that every now and again - the view will still load with no error and then the if statement will say it is an error.
