[New Release] Rx590 Adjustment Program

the rx 590 is about to hit the market in june. already, pc builder and hardware ninja have written about how it is capable of competing with nvidia`s most recent models, while the max-q/small form-factor seekers still have choices such as the geforce gtx 980 among the mid-range models and the geforce rtx 2080ti among the high-end models. we have already seen a few solid reviews from pc builders, such as these from ausgamers and overclock.com. overclockers has also shown off a benchmark on its youtube channel with the rx 590 along with the rx 580 and rx 480. the overclockers team claimed that the rx 590 is the best value in 2019, with the rx 580 and rx 480 taking second and third place. up until recently, you could only purchase the new nvidia gtx 1080 for the best performance value in any given price range, with the most expensive card ranging from $700 for a last-gen gtx 1080 to as much as $1,000 for the 1080 ti. now, however, amd has started to make headway in the best value for performance category with the rx 590, which is about to go on sale. amd is projecting the price of the rx 590 as being between $400 and $450, a big price cut from the rx 580 which was released just a few months ago. it could be a surprise hit that will have many buyers swinging to the amd camp, replacing an older gtx card and pushing the nvidia cards out of their original price segment. the rx 590 is the rx 580`s little brother. while the rx 580 offers 8gb of gddr5 that can max out at 11gbps, the rx 590 will only be equipped with 4gb of gddr5 memory that can max out at 8gbps. it will have a similar design to the rx 580 but will be lower clocked at 1465mhz, same as the rx 580. the reference clocks for the rx 580 were 1480mhz, while the reference clocks for the rx 590 are 1415mhz.

this was a real challenge for us, and our team has spent much time on developing the new approach, and will continue to do so. this is a big step forward for cycles, as having the same codebase for the rendering and the gpu can allow for an easier path for rendering programs and developers to implement. cycles now comes with built-in opencl support, and has a new developer overview page for developers looking to get started with gpu rendering. one of the biggest questions for cycles users has been to know whether the cycles open source license (which allows developers to use it on any project) will affect gpu rendering. the answer to this question is, of course, no. gpu rendering is not an open source project, and cycles is not an open source project. the cycles repository is licensed under the gpl v3. the project is released under a proprietary license. this proprietary license does not affect gpu rendering in any way. [update 2: these are the results from amds cpu and gpu review driver updates, the performance from the rx 590 dropped. in other words, rx 580 was still faster, but rx 590 was faster than rx 480, before the release of the rx 590 drivers. in fact, after all these years, amd is even working on an additional free game incentive program for this release. its a two-year program that will give you a free copy of borderlands 3 and shadow of the tomb raider every year, if youve bought a rx 590, and it will run for two years after your card is released. that's pretty awesome. this is a fantastic package, and i can only hope that amd will continue its free games offer with another press release in the near future. but for now, weve got some killer free games to show you! let the games begin.. 5ec8ef588b
