In addition to retaining clone layers, Smart Objects now apportions the layer's opacity while retaining instant previews, and layer groups maintain their hierarchy even after being converted to a Smart Object. You can also control the opacity of Smart Objects independently of the parent group. Smart Sharpen raises image sharpness values automatically based on the pixels in your image, saving you time and effort. Quick Mask lets you create complex selection shapes in a single click, enabling you to retouch and remove sections of images quickly and precisely.
